I am a developer who keeps learning every aspect of developing applications from design to coding. I am highly motivated to design & build intuitive and responsive web applications. Even though I really enjoy designing I want to work with back-end of the applications when it comes to projects. For my next move I want to be in an environment that allows me to sharpen my skills as a back-end (server-side) developer.

Projects

[My-Portfolio](#)

\$ I made this site for showcasing my tech stack as a developer.

\$ I used express.js in the back-end and whole project based on MERN -minus the react which I am still learning - which stands for MongoDB, Express.js, React.js, Node.js.

[E-commerce Website with Laravel](#)

\$ I built this site by using Laravel framework. I also used bootstrap and CSS for the UI design.

\$ I did not deploy it but I learned a lot from this project about php and back-end development with Laravel framework.

[Javascript Online Game](#)

\$ This is one of the games I did with when I first started to learn JavaScript.

Interests

Creative Content Writing

I, as a person who keeps journals, write short stories and poems, like to come up with creative contents about the topics that pick my interest or things that I am trying to learn.

\$ You can read my articles in fairydevmother.substack.com.

Oil Painting

I started to paint on canvases when I was 12 because I was impressed with Van Gogh's art works. His post impressionist works gave me inspiration to create.

Art

The sense of creating something is fascinating. But I also love looking and thinking of the meaning in art. I go to an art museum and stare at each one for hours and each one of them evoke something different in me.

Violin

I picked up the violin a little late. But now when I need to focus or better yet when I need to solve a problem, I start to play and it helps me see things from a different perspective.
